TOP GARAGE SECURITY THE BEST OF THE BESTS
ANTI-BURGLAR LOCK SYSTEM SEGRETO

Convenience fist control the entrance from one remote control

SELECTING THE METHOD OF GATE CONTROL:

Floating code key fobs, IR key fobs, electronic keys, buttons, keyboard, magnetic cards, PROX cards and tags, phone, tablet, biometric keys, telepass, mechanical key

Smart home integration or external access control system

To use the maximum energy consumption not only for gate automation, but also to cover the approaching house, you can use the "smart home" assembly. The entire system was controlled using a smartphone, tablet, computer or other device that acts as a central control panel.

If smart home technology is more often used in a private home, then integration with access control systems at closed commercial, government and even military facilities will allow remote control of the gate using the desired computer or terminal.

**Choosing a gate control system that is convenient
for each of you!**
